### NACHO CHEESE DISPENSER INSTRUCTIONS

**Note: All concession equipment should be operated on its own 20 amp/110v circuit!**

1. Open dispenser door and remove upper warming tray.
2. Place the cheese pouch in the tray and close the door. It will take approximately 2 hours to warm the cheese pouch.  
NOTE: Cheese pouch may be pre-heated by putting in microwave.
3. Remove preheated pouch from dispenser upper warming tray.
4. Lift the ring and pull the dust cover from the fitment.
5. Remove tube/piercer assembly from the plastic bag and insert piercer into the round top of the bag.
6. Rotate piercer clockwise while pushing in so that the piercer punctures the seal membrane inside the fitment. **CAUTION: cheese sauce is HOT!**  
DO NOT insert piercer with the fitment lying flat on the table or with the pouch folded over behind the fitment. This may allow the piercer teeth to cut through the outer wall of the pouch.
8. Open dispenser door and remove upper warming tray.
9. Place preheated pouch in lower tray with pouch fitment protruding down through the hole in front of tray.
10. Open tube clamp by rotating cam counterclockwise.
11. Guide tube through the pump slot from top to bottom.
12. Close the clamp by rotating the cam fully clockwise.
13. Place unopened pouch in upper warming tray to preheat and place tray in dispenser.
14. Close the door.
15. Serve by pressing one of the 3 buttons on the front right side of the machine.

**\*\*\*RESPONSIBLE FOR ALL DAMAGES\*\*\***

Pierce &  
insert tube.

Guide tube  
through pump  
slot.
